Create an anchor and link to it

Version: 10.2

An anchor is an HTML code that is used as a bookmark to create a link to a particular section within a page. For example, it could be a *Back to top* link that takes the user to the top of the current page.

In Rich Text fields, you can use the Hyperlink Manager to create an anchor in your text, and then to create the link to your anchor.

Note

In Word fields, you cannot access the Hyperlink Manager. Instead, you must use the Hyperlink functionality within Microsoft Word.

To create an anchor:

1. In the Content Editor, navigate to the item where you want to insert an anchor.
2. Open the Rich Text Editor and select the text or image that you want make an anchor.
3. Click the **Hyperlink Manager** .

The image shows a dialog box titled "Hyperlink Manager" with a close button (X) in the top right corner. Below the title bar, there are three tabs: "Hyperlink", "Anchor", and "E-mail". The "Anchor" tab is currently selected. Inside the "Anchor" tab, there are two input fields: "ID" and "Name". The "ID" field is empty, and the "Name" field contains the text "My Anchor". To the right of the "ID" field is a circular refresh icon. At the bottom right of the dialog box, there are two buttons: "OK" and "Cancel".

5. Click **OK**.
6. To create a link to this anchor, you create a new link with the Hyperlink Manager. On the **Hyperlink** tab, in the **Existing Anchor** field, choose the anchor you created and click **OK**.
