Preview a webpage

Version: 10.2

The preview functionality lets you preview all your items on your website before you publish them.

The preview functionality lets you:

- Specify a preview date, so that you can see how your website looks at a point in the past or future, according to the **publishing restrictions** that you have set up.
- See how a webpage looks in different language versions.
- Preview how the page displays on different devices.

We recommend that you only preview items that are *publishable*. That is, when:

- The **Publishable from** field is set to today's date or earlier.
- The **Publishable to** field is set to today's date or later
- The item is in the final workflow state.

If you try to preview an item that isn't publishable, you'll get an an error. That's because the preview simulates what can be published immediately.

This topic outlines how to:

- [Preview the default website from the Sitecore Desktop](#)

Preview a page from the Content Editor or the Experience Editor [↗](#)

You can preview the currently selected page in preview mode.

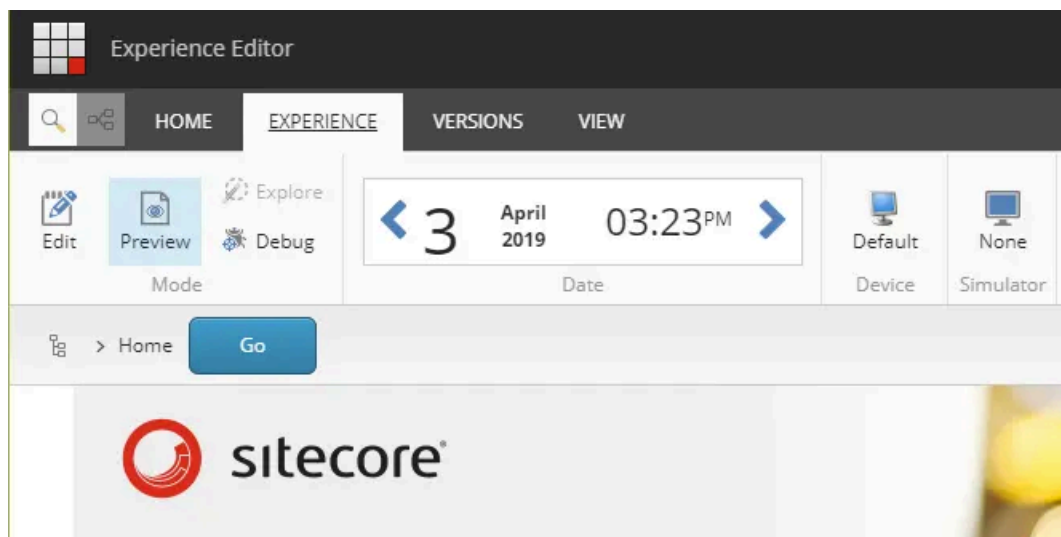

To preview a webpage:

1. Open the preview mode from either the Experience Editor or the Content Editor:

- On the Experience Editor ribbon, in the **Mode** group, click **Preview**.
- In the Content Editor, on the **Publish** tab, in the **Publish** section, click **Preview**.

2. Select the preview parameters:

- **Date** - to view how the page will appear on a different date, on the **Experience** tab, in the **Date** group, click the date, or click the blue arrows to select the previous day or the next day.

- **Language** – to view the page in a different language, on the **Versions** tab, in the **Language** group, click **Language**  and select the language that you want from the list that appears.

 Note

You must have the necessary security permissions to access the **Versions** tab.

3. Navigate through the pages to preview your whole website.

 Tip

In the preview mode, you can also use the search functionality to navigate to a specific page that you want to preview.

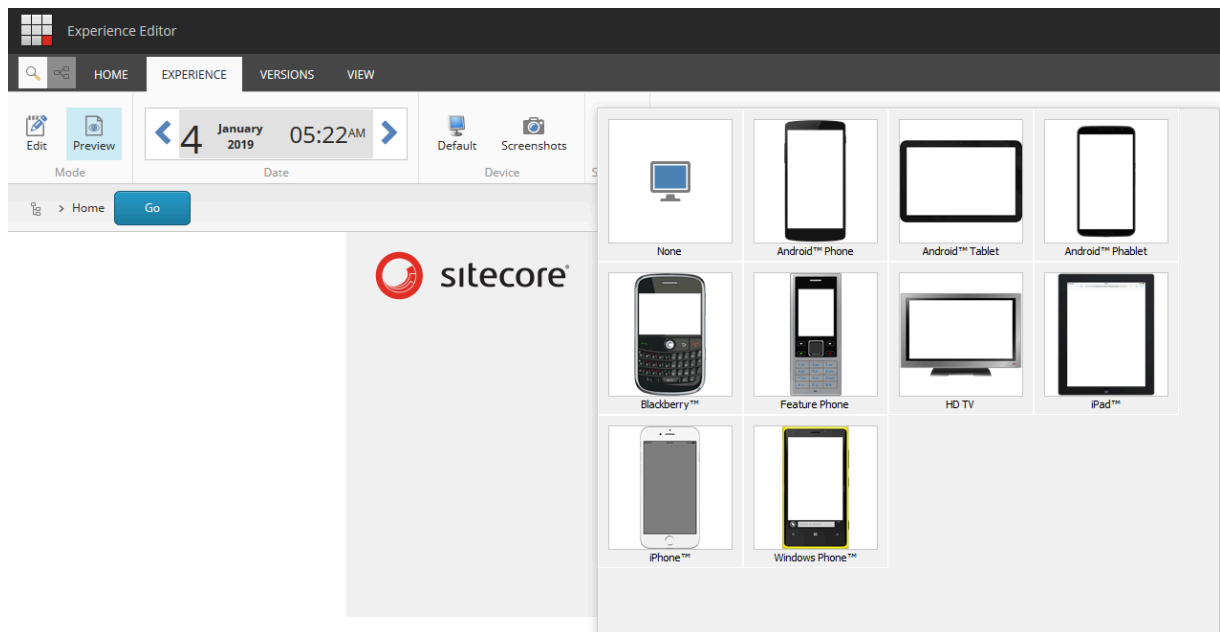

Preview a page in the Device Simulator

The Device Simulator lets you preview your website in a simulation of a different device, such as an iPhone, iPad, Android Phone, or Blackberry.

The Device Simulator is not a pixel-perfect rendition of the website as it appears on each device. However, it gives you a good indication of how the device presents the website and it lets content authors quickly see how pages look on mobile devices.

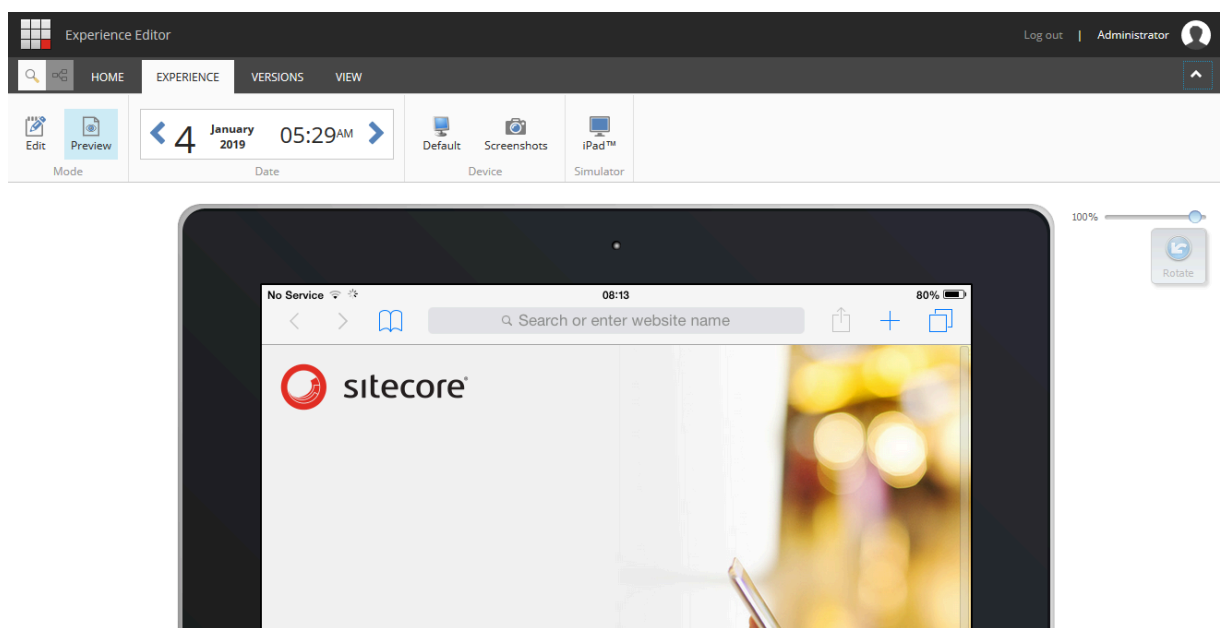

To preview a page in the Device Simulator:

1. In the Experience Editor, on the **Experience** tab, in the **Mode** group, click **Preview**.
2. In the **Simulator** group, click the device icon and select a device.

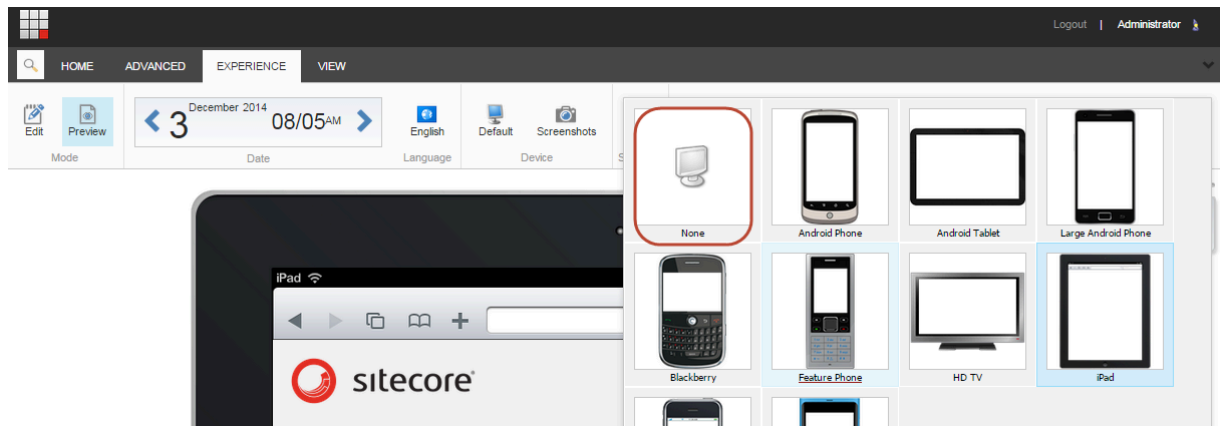

3. In the Device Simulator, all the navigation remains fully functional. You can:

- Browse through the website.
- Click **Rotate** to change the orientation of the device.
- Scroll up and down, as well as left and right.

This website uses cookies to enhance the user experience.

4. To return to the default page preview, click the device icon and in the drop-down menu, click **None**.

Preview the default website from the Sitecore Desktop [🔗](#)

You can preview your website from the Sitecore Desktop.

To preview a website from the Sitecore Desktop:

- In the Sitecore Desktop menu, click **Preview**.

 Content Editor Manage your content.	 Experience Editor Edit your website in a...
 Marketing Control Panel Configure marketing features.	 Preview Preview your website.
 Media Library Maintain your media items.	 Debug Open the Debugger.
 Commerce Editor Manage Commerce content	 Recycle Bin Manage deleted items
 Template Manager Create new templates.	 Search Locate your content.
 Sitecore App Center Install and maintain apps.	 Control Panel
 Publish Site Publish your website.	 PowerShell Console CLI interface to your content.
	 PowerShell Toolbox PowerShell Solutions
	 Security Tools ▶
	 Development Tools ▶
	 Reporting Tools ▶
	All Applications ▶

Sitecore displays a preview of the default website in a new window.

Note

If you do not have permission to view the default website, you receive an error
