

Sitecore Experience Platform / Content authoring / Publishing / Validate an item

Validate an item

Version: 10.2

Before you publish an item, you can run a few checks on the item to make sure that it is ready to be published.

Check the markup of a webpage [↗](#)

You can check the markup of your webpages by sending all the HTML fields to a W3C HTML Validator.

To send all the HTML fields to a W3C HTML Validator:

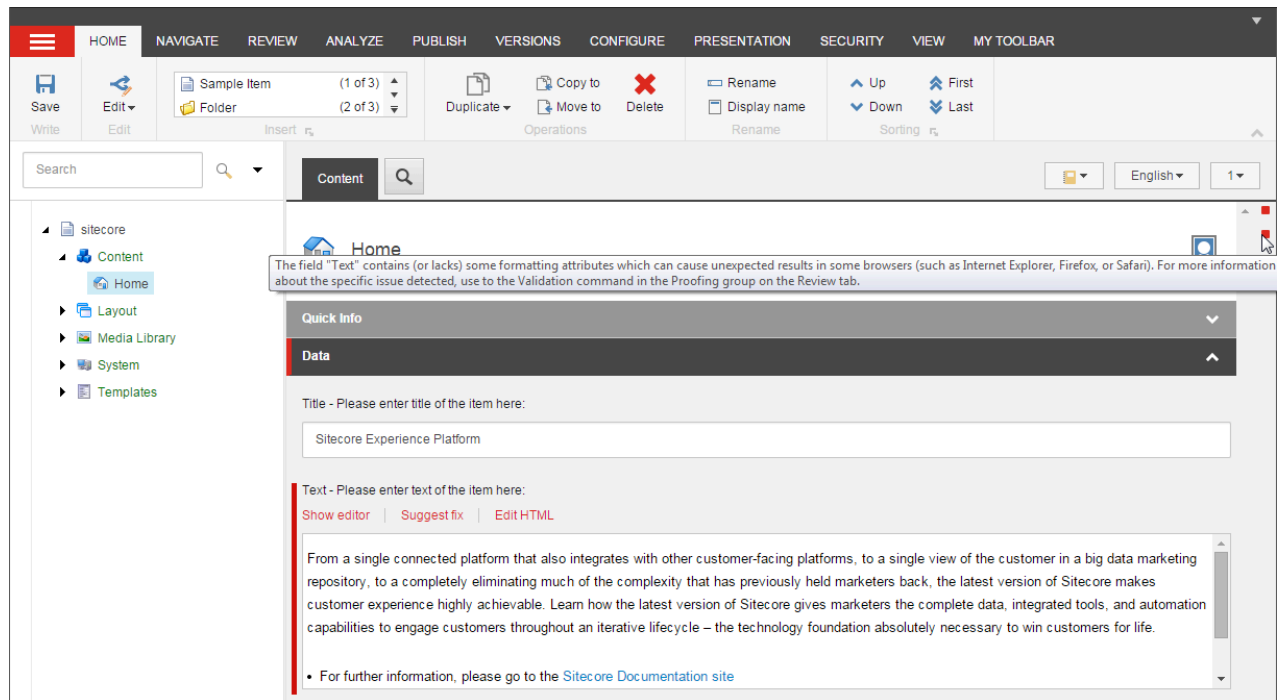

1. In the Content Editor, navigate to the relevant item or page.
2. To check the markup of your webpages, on the **Review** tab, in the **Proofing** group, click **Markup**.

The result of the check opens on a webpage, where you can see detailed notes and potential issues.

Validate an item [↗](#)

The Sitecore field validators are a set of user-input validators that can be applied to an

The Content Editor validates the fields automatically. If there are fields that contain validation errors or warnings, a red bar appears to the left of the relevant field and in the validator bar, the icons change to red or yellow depending on the type of error. To see the details of the errors, move your mouse over the individual icons in the validator bar.

You can also run the validation test manually and view the details about the validation test in the **Validation Result** dialog box.

To run a validation test manually on an item:

1. In the Content Editor, navigate to the relevant item or page.
2. To run the validation test on your item or page, on the **Review** tab, in the **Proofing** group, click **Validate**.

In the **Validation Result** dialog box, you can see an overview of the results of the validation and suggestions for change. The possible values are:

- Suggestion (yellow) – look into the issue and decide if an action is needed.
- Warning (orange) – act on the issue.
- Error (red) – this is an error.
- CriticalError (red) – the warning appears before you save the changes.
- FatalError (red) – you cannot save the item before the error is corrected.

Validation Results

The results of the validation check.

Item

	No duplicate name The item must have a unique name.	OK
	Has no broken links The item must have no broken links.	OK
	Is rendered item valid XHTML document The item must render as a valid XHTML document.	The page represented by the item 'Home' failed to render properly. The error was: The remote server returned an error: (500) Internal Server Error.
